

4. Gasoline and Lubricating Oil

The new oil injection system precludes necessity of pre-mixing gasoline and oil.

However we recommend the following fuel mixtures and oil:

Break-in period

FUEL TANK · OIL TANK

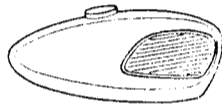

Mixed gasoline
and oil (25 to 1)
15 l (3⁴/₅ US.gal)

Oil 2.5 l
(³/₅ US.gal)

After break-in period

FUEL TANK · OIL TANK

Gasoline
15 l (3⁴/₅ US.gal)

Oil 2.5 l
(³/₅ US.gal)

It is only necessary to check the oil level through the peephole in the oil tank.

If the level has dropped below level, fill up with 2 litres (¹/₂ US.gal).
